| The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply | | | | | | |
| A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). | | | | | | |

Art Unit: 3635

DETAILED ACTION

Claim Objections

Claims 1,7 and 13 recites the limitation "said channel" in lines 35, 37 and 37, respectively. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2,6-9 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent #5,816,010 to CONN. Regarding claims 1 and 7, CONN discloses watertight decking including a first end panel/second end panel/and at least one intermediate panel (10) disposed between said first and second end panels (10), see figure 4, each of said panels being a rigid, load-bearing extrusion having generally flat, planar upper surface (26) and bottom surface (28) opposite said upper surface; said first end panel and said intermediate panel (10) each further including:

a first attachment edge (160); a tongue and groove assembly (14) having a tongue (38) extending along said first attachment edge; a channel first wall (36) depending from each said first attachment edge (160), and having an upper edge and opposite said upper edge thereof; lower edge a channel floor (42) extending from said lower edge said channel first wall (36), and having a first wall edge and second wall edge opposite said first wall edge thereof; a channel second wall (46) extending from

Art Unit: 3635

said second wall edge of said channel floor (42), spaced apart from and generally parallel to said channel first wall (36), and haying a lower edge end an upper edge opposite said lower edge thereof with said upper edge spaced apart from said first attachment edge (160); an attachment flange (52) extending outwardly from said lower edge of said channel second wall (36), generally coplanar with said channel floor (42); said second end panel and said at least one intermediate (10) each further including:

second attachment edge (140); a tongue and groove assembly (16) including a groove (G, 50), see the marked attachment below, wherein the groove (G, 50) is disposed along said second attachment edge (140), engaging said tongue first end panel and said intermediate panel when assembled therewith; and a drip rail (20) depending from said second end panel (140) and said intermediate panel and spaced apart from said second attachment edge (140) thereof, extending into said channel (G, 50) said first end panel and said intermediate panels (10) and bearing against said channel second wall (46) and wedging said groove (24) of said second attachment edge (140) tightly against said tongue (38) of said first attachment edge (160), column 4, line 45-62, forming a tongue and groove assembly and preventing relative lateral movement between adjoining panels (10) when at least two of said first end panel, said second end panel, and said at least one intermediate panel (10) are assembled together. In reference to claims 2 and 9, the drip rail (20) includes an arcuately convex contact surface (along 24). Regarding claim 6, the watertight decking of CONN further includes a resilient moisture bead (68). In reference to claims 8 and

Art Unit: 3635

12, the tongue and groove assembly (14) of the first edge (160) includes a tongue (38) and the tongue and groove assembly (16) of the second edge (140) includes a groove (24).

Allowable Subject Matter

Claims 3-5,10 and 11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 13-18 are allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yvonne M. Horton whose telephone number is (571) 272-6845. The examiner can normally be reached on 6:30 am - 3:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carl D. Friedman can be reached on (571) 272-6842. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
